

LDAP Account Manager

- [Introduction](#)
- [Installation on Turnkey Debian](#)
- [Installation on Ubuntu Server 22.04](#)
- [Configuration of the LDAP Account Manager](#)

Introduction

What is the LDAP account manager?

LDAP Account Manager (LAM) is a web frontend for managing entries (e.g. users, groups, DHCP settings) stored in an LDAP directory. LAM was designed to make LDAP management as easy as possible for the user. It abstracts from the technical details of LDAP and allows persons without technical background to manage LDAP entries. If needed, power users may still directly edit LDAP entries via the integrated LDAP browser.

[LDAP Account Manager](#)

Features

The most important account types which are supported by LAM are Samba, [Unix](#), [Zarafa](#) and [PPolicy](#). The user can define profiles for all account types to set default values. Account information can be exported as [PDF](#) files. There is also the possibility to create users via file upload. It also includes the tree view of [PhpLDAPAdmin](#) to access the raw LDAP attributes. LAM is translated to 16 languages.

Supported account types:

- Unix
- Samba 3,4
- Kolab
- Address book entries
- Asterisk (incl. voicemail and Asterisk extensions)
- Mail routing
- IMAP mailboxes (non-LDAP, via IMAP protocol)
- Hosts

- FreeRadius
- Authorized services
- SSH keys
- File system quota (in LDAP (systemQuotas) and via external script)
- DHCP entries
- NIS netgroups

Installation on Turnkey Debian

Installation

```
apt -y install ldap-account-manager
```

The account manager is available on <http://lamp.simmy.ch/lam>.

<https://www.ldap-account-manager.org/lamcms/documentation>

Installation on Ubuntu Server 22.04

Install Apache Webserver and PHP

```
apt -y install apache2 php php-cgi libapache2-mod-php php-mbstring php-common php-pear
```

Then enable php-cgi PHP extension:

```
a2enconf php*-cgi  
systemctl reload apache2
```

Install LDAP Account Manager

```
apt -y install ldap-account-manager
```

The account manager is available on <http://lam.simmy.ch/lam>.

Configuration of the LDAP Account Manager

Change master password

Click on LAM configuration on the upper right corner.

Edit general settings

Edit server profiles

Import and export configuration

"Edit general settings"

Please enter the master password to change the general preferences:

Master password

The Master password is "lam".

Scroll down to "Change master password" and enter your desired password two times.

The password will be saved in cleartext in a configuration file of LAM

Add certificates

General settings

Configuration storage

Database type: Local file system

Security settings

Session timeout: 30

Hide LDAP details on failed login:

Allowed hosts:

SSL certificates

No file selected.

Browse... Upload use custom CA certificates

Import from server

Common name	Valid to	Serial number	Delete
ca	2032-03-06	6623906670202548793	
OpenLDAP	2025-02-20	1020037069710758418	

The communication with the the OpenLDAP server over SSL didn't work. So finally I added two certificates. The CA, which I simply uploaded (Choose file --> "Upload") and the certificate of the Domain Controller (enter ldaps://openldap.simmy.ch --> "Import from server").

Scroll down and click "Ok". Restart the apache server:

```
systemctl restart apache2
```

Create a profile for OpenLDAP

Click on LAM configuration on the upper right corner.

Click on "Edit server profiles".

Click on "Manage server profiles".

Profile management

Add profile

Profile name	<input type="text" value="OpenLDAP"/> ?
Profile password	<input type="password" value="....."/>
Reenter password	<input type="password" value="....."/>
Template	<input type="text" value="windows_samba4"/> ?

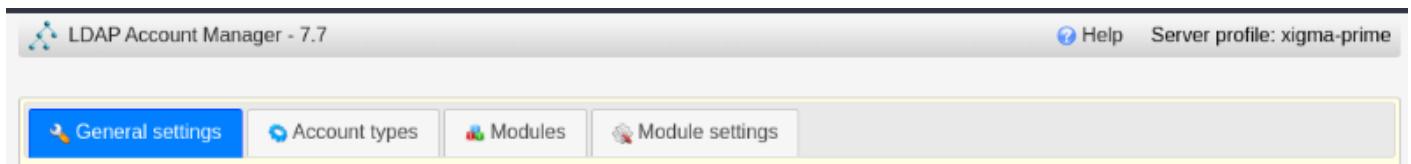

Add

Enter these options:

1. Profile name --> *OpenLDAP*
2. Profile password --> *your password here*
3. Reenter password --> *your password here*
4. Template --> choose Template "unix" for OpenLDAP
5. Add

The password will be saved in cleartext in a configuration file of LAM

Configuration of the profile for OpenLDAP

General settings

Server settings

Server settings

Server address *	ldaps://openldap.simmy.ch:636	?
Activate TLS	no	?
LDAP search limit	-	?
DN part to hide		?

[Advanced options](#) [+](#)

Server address --> <ldap://openldap.simmy.ch:389>

Tree view

Tree suffix [?](#)

Tree suffix: DC=simmy,DC=ch

Security settings

Security settings

Login method	Fixed list	?
List of valid users *	<input type="text" value="CN=Administrator,CN=Users,DC=simmy,DC=ch\nCN=neo,CN=Users,DC=simmy,DC=ch"/> ?	

Login method: Fixed list

List of valid users:

```
cn=admin,dc=simmy,dc=ch
cn=binduser,ou=Users,dc=simmy,dc=ch
cn=Holger Schindler,ou=Users,dc=simmy,dc=ch
```

Account types

Create the OU groups before doing this:

Active account types

 Users	User accounts (e.g. Unix, Samba and Kolab)	 
LDAP suffix *	<input type="text" value="ou=Users,dc=simmy,dc=ch"/>	
List attributes	<input type="text" value="#uid;#givenName;#sn;#uidNumber;#gidNumber"/>	
Custom label	<input type="text"/>	
Additional LDAP filter	<input type="text"/>	
Hidden	<input type="checkbox"/> 	
 Groups	Group accounts (e.g. Unix and Samba)	 
LDAP suffix *	<input type="text" value="ou=Groups,dc=simmy,dc=ch"/>	
List attributes	<input type="text" value="#cn;#gidNumber;#memberUID;#description"/>	
Custom label	<input type="text"/>	
Additional LDAP filter	<input type="text"/>	
Hidden	<input type="checkbox"/> 	

These two LDAP suffixes have to be set:

- *CN=Users,DC=simmy,DC=ch*
- *OU=Groups,DC=simmy,DC=ch*

Modules

Nothing to change here.

Module settings

Nothing to change here.

Final

"Save" and login to your profile "OpenLDAP". You will have to enter the password of the Administrator.
