

Disable SELinux on Fedora

Permanently Disable SELinux on Fedora

Update the SELinux configuration file and set `SELINUX=disabled` to permanently disable the SELinux on your system. This will completely disable all the SELinux contexts.

```
sudo nano /etc/selinux/config
```

Set `SELINUX` value to `disabled`:

```
SELINUX=disabled
```

Reboot your instance after making changes.

Note - You can again activate the SELinux by setting `SELINUX=enforcing` in configuration file.
