

Tutorial on ufw

UFW, or Uncomplicated Firewall, is a simplified firewall management interface that hides the complexity of lower-level packet filtering technologies such as iptables and nftables. If you're looking to get started securing your network, and you're not sure which tool to use, UFW may be the right choice for you.

Here is a link that shows how to set up the firewall on Ubuntu:

[How To Set Up a Firewall with UFW on Ubuntu 22.04](#)
